Passage One

In 2020, the Nobel Peace Prize was awarded to the World Food Program (WFP).

Why a Nobel Prize for the WFP, and why now? In 2019, the WFP assisted nearly 100 million people in 88 countries. It is the safety net for those who fall off the edge of existence. It is a response to solving the problem of food instability. Its Nobel Prize reminds us all of the moral hazard in imagining that the poor and vulnerable are somebody else's problem.

The WFP has been around since 1961 and has been the global coordinator of nationally based efforts to avoid disasters with food aid. Despite decades of effort to eliminate hunger, the latest estimate is that about 11% of people on the planet (about 820 million people) are suffering daily undernourishment. Progress at reducing undernourishment has stopped despite gains through the 1990s and 2000s.

Developed countries sometimes offer food and aid to developing ones, but at a price. One American philosopher

stated that addressing the needs of the poor and vulnerable is about more than money—it is mostly about creating conditions under which prosperity and opportunity can thrive. When aid is offered with heavy conditions attached, like loan repayment or food for resources, it often widens the gap between rich and poor and sustains the old world order. This is why the work of the WFP is so vital.

The scientific community, however, can provide a helping hand to the WFP. By sharing knowledge of agriculture and climate with peers in countries most vulnerable to poverty and hunger, scientists can help reduce these problems. By making its voice heard, science can lead by example. The ability to overcome food shortages that must be built into some of the poorest countries will not come from loans from wealthy countries, which may have food problems of their own, or world economic institutions. This ability will be built upon self-confident people using open and shared scientific knowledge to pull themselves out of their misery.

26. What does the WFP's winning of the Nobel Peace Prize make us realize?
- A) More and more people in the world are suffering from starvation.
 - B) All of us can be affected by food instability one way or another.
 - C) It is hazardous to leave millions of people poor and vulnerable.
 - D) It is morally wrong to think helping the poor is not our business.
27. What do we learn about the WFP's effort to eliminate hunger?
- A) It has ensured a sufficient food supply to millions.
 - B) It is still far from its goal despite the progress made.
 - C) It has done a good job in combating natural disasters.
 - D) It is preventing starvation occurring on a global scale.
28. What will happen when food aid is offered at a price?
- A) The rich will become richer and the poor poorer.
 - B) More people will be willing to join in the effort.
 - C) More food will be made available to the needy.
 - D) The relief effort will be rendered less sustainable.
29. How can scientists help cope with poverty and hunger?
- A) By collaborating closely with world economic institutions.
 - B) By sharing expertise with peers in poverty-stricken nations.
 - C) By setting up more food research programs in developing countries.
 - D) By building self-respect in people suffering from under nutrition.
30. What message does the author try to convey at the end of the passage?
- A) Wealthy nations should solve their own food problems first.
 - B) Rich countries should be more generous in providing food aid.
 - C) Poor nations should enhance their own ability to solve their food shortages.
 - D) World economic institutions should play a bigger role in fighting hunger.

Passage Two

Interactive television advertising, which allows viewers to use their remote controls to click on advertisements, has been pushed for years. Nearly a decade ago it was predicted that viewers of "Friends," a popular situation comedy, would soon be able to purchase a sweater like Jennifer Aniston's with a few taps on their remote control. "It's been the year of interactive television advertising for the last ten or twelve years," says Colin Dixon of a digital-media consultancy.

So, the news that Cablevision, an American cable company, was rolling out interactive advertisements to all its customers on October 6th was greeted with some skepticism. During commercials, an overlay will appear at the bottom of the screen, prompting viewers to press a button to request a free sample or order a catalog. Cablevision 8 hopes to allow customers to buy things with their remote controls early next year.

Television advertising could do with a boost. Spending fell by 10% in the first half of the year. The popularization of digital video recorders has caused advertisers to worry that their commercials will be skipped. Some are turning to the Internet, which is cheaper and offers concrete measurements like click-through rates—especially important at a time when marketing budgets are tight. With the launch of interactive advertising, "many of the dollars that went to the Internet will come back to the TV," says David Kline of Cablevision. Or so the industry hopes.

In theory, interactive advertising can engage viewers in a way that 30-second spots do not. Unilever recently ran an interactive campaign for its Axe deodorant (除臭剂), which kept viewers engaged for more than three minutes on average.

The amount spent on interactive advertising on television is still small. Magna, an advertising agency, reckons it will be worth about \$138 million this year. That falls far short of the billions of dollars people once expected it to generate. But DirecTV, Comcast and Time Warner Cable have all invested in it. A new effort led by Canoe Ventures, a coalition of leading cable providers, aims to make interactive advertising available across America later this year. BrightLine iTV, which designs and sells interactive ads, says interest has surged: it expects its revenues almost to triple this year. BSkyB, Britain's biggest satellite television service, already provides 9 million customers with interactive ads.

Yet there are doubts about whether people watching television, a "lean back" medium, crave interaction. Click-through rates have been high so far (around 3–4%, compared with less than 0.3% online), but that may be a result of the novelty. Interactive ads and viewers might not go well together.

31. What does Colin Dixon mean by saying "It's been the year of interactive television advertising for the last ten or twelve years" (Lines 3–4, Para.1)?
- A) Interactive television advertising will become popular in 10–12 years.
 - B) Interactive television advertising has been under debate for the last decade or so.
 - C) Interactive television advertising is successful when incorporated into situation comedies.
 - D) Interactive television advertising has not achieved the anticipated results.
32. What is the public's response to Cablevision's planned interactive TV advertising program?
- A) Pretty positive.
 - B) Totally indifferent.
 - C) Somewhat doubtful.
 - D) Rather critical.

33. What is the impact of the wide use of digital video recorders on TV advertising?

- A) It has made TV advertising easily accessible to viewers.
- B) It helps advertisers to measure the click-through rates.
- C) It has placed TV advertising at a great disadvantage.
- D) It enables viewers to check the sales items with ease.

34. What do we learn about Unilever's interactive campaign?

- A) It proves the advantage of TV advertising.
- B) It has done well in engaging the viewers.
- C) It helps attract investments in the company.
- D) It has boosted the TV advertising industry.

35. How does the author view the hitherto high click-through rates?

- A) They may be due to the novel way of advertising.
- B) They signify the popularity of interactive advertising.
- C) They point to the growing curiosity of TV viewers.
- D) They indicate the future direction of media reform.
